

Effective: 1 August 2014

Keysight Technologies' Registration Status

Keysight Technologies, Inc. has an established corporate Quality Policy and has implemented a Business Management System (BMS) consistent with ISO9001 which covers the operations of all Research and Development, Marketing, Manufacturing, Service and Support, Calibration and Repair, Procurement, and Training within the Corporation.

Subcontractors are required to either maintain ISO9001 certification or maintain an equivalent Business and Quality Management System to assure the quality and reliability of their products. Annual audits of subcontractors and strategic suppliers are conducted to assess compliance with both ISO9001 and Keysight specific quality and reliability requirements.

The BMS is utilized by the organization to establish standards by which the business organization shall operate. The intent is to assure that Keysight provides products, services, and interaction experiences of the highest quality and value to our customers, whilst establishing operational excellence within the businesses to ensure the long term organizational and financial strength of the company.

Keysight (formerly Agilent Technologies' Electronic Measurement Group) has maintained certification of all its ongoing operations, both domestic and international, since 2003 through DEKRA (formerly known as KEMA). Keysight was granted Advanced Surveillance Recertification Procedures (ASRP) status by DEKRA, indicating a capability maturity that allows DEKRA to utilize Keysight's Audit program in conjunction with DEKRA's Audit Program. Utilizing Keysight's internal audit capability, and overseen through witness, delegated and DEKRA audits annually, the ASRP affords Keysight greater, more frequent surveillance, as required to ensure compliance to ISO9001.

Keysight commits to maintaining ISO9001 certification and transition to applicable revisions in a timely manner, to maintain a focus on product quality and reliability, business continuity and viability through continuous product, process, and operational improvements.
